

BWTS and Pumps for 7 new Maersk container ships

DESMI supplies pumps and ballast water treatment systems to 3,600 teu container ships for 7 Maersk Line new builds at COSCO Zhoushan.

The first of seven shipsets will be shipped in May, 2016.

DESMI has had a great collaboration with COSCO Zhoushan Shipyard in China regarding the planning and delivery of pumps and ballast water treatment systems for the seven new 3,600 teu container ships. The new vessels are owned by Maersk Line and will be built to Danish Flag and Lloyds Register classification.

DESMI will deliver a broad ranged pump package and 2 x 500 m³/h RayClean™ ballast water treatment systems for each vessel.

CASE STORY

The ships will be built according to Lloyds Register's Rules and Regulations and will have Ice Class 1A and have a length of 200 meters and a breadth of 35.2 meters.

We are very pleased that COSCO Zhoushan, in conjunction with Maersk, has chosen DESMI and we are looking forward to working closely together on this important project.

RayClean™ 500	
Capacity:	500 m ³ /h
Water quality:	>33% UVT, all salinities
Configuration:	Semi skid mounted
Power	42 kW
Class	Lloyds Register
