

CompactClean Installation on Board Providana

The 1000 m³/h installation of DESMI Ocean Guard's CompactClean system was conducted in Chengxi Shipyard on the vessel Providana owned by Masterbulk Pte Ltd.

The installation was a full integration of the system, which included:

- A full 1000 m³/h CompactClean ballast water management system
- An additional valve package and control system
- Frequency converters on the ballast water pumps
- Deck office operative system
- Internet uplink system

Kevin Leach-Smith, Vice President, Operations, Master-bulk Pte Ltd:

"We chose DESMI's CompactClean system because of the very small footprint and our trust in DESMI as a well-established supplier of marine equipment. An installation like this is a large project and requires good cooperation between the owner, technical manager, shipyard and system supplier. All parties did a professional job in making this BWMS installation a smooth and efficient process."
